

# Versatile Color Label Designer

For Use With Versatile Software

The **Versatile Color Label Designer** is an add-on utility for Versatile software that lets you create custom color-coded label designs for files or boxes. The Versatile Color Label Designer also allows for seamless printing through the TabQuik® application, and can import TabQuik definition files for direct printing from Versatile.

With the Versatile Color Label Designer, users can design and print labels right from within the Versatile software. There is no need to purchase and learn expensive third-party software. The Versatile Color Label Designer's interface lets you design your label in an easy-to-use WYSIWYG screen. It comes with a pre-defined sample label design that you can use as the basis for new labels.

The Versatile Color Label Designer prints color on your labels based on text, date, and numeric data from your Versatile database. Color mapping is set up in a color file that supports simultaneous use of different color sets for letters, numbers, months, and years. A set of user-defined colors may also be defined and applied directly to components. Each color set may be edited and saved as part of the project.

As with other Versatile label design features, the Color Label Designer allows users to preview labels as they are being designed, as well as to print from any starting position on a sheet of labels. The Color Label Designer also prints static shapes, text, barcodes, lines, and graphics such as a company logo or any bitmap file.

The Versatile Color Label Designer color files may be shared among different projects and between users. Data may be edited and saved with a label project so the labels may be printed again without having to import new data.

Once a Versatile Color Label Designer project is displayed, you can select a different set of data for your labels. You can even include the data set from another Versatile Color Label Designer file, or from a tilde-delimited .DAT file, such as a TabQuik data file.

The Versatile Color Label Designer offers Zasio customers a very affordable color-labeling solution along with the outstanding customer support for which Zasio has become recognized.

#### ▣ System specifications and requirements

Computer with Intel Pentium III – Pentium 4 recommended  
64 megabytes RAM, 128 megabytes recommended  
Microsoft Windows NT® with Service Pack 6 or later,  
Windows2000 with with Service Pack 4 or later,  
or Windows XP Professional
